

Tutorial – Automated Deduction with Legal Texts

Introduction to a normative logic

Tomer Libal

Logical reasoning

- ▶ Scenario
 - ▶ We have a problem
 - ▶ Some facts
 - ▶ context
- ▶ We consult the right legislation
- ▶ How do we reach conclusions?

Logical reasoning

- ▶ Scenario
 - ▶ We have a problem
 - ▶ Some facts
 - ▶ context
- ▶ We consult the right legislation
- ▶ How do we reach conclusions?
- ▶ Can a computer do that for us?

Computer reasoning

- ▶ Given a legal text
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ Andrew is a doctor
- ▶ how can a computer decide if Andrew qualifies?

partially based on an example from Allen, Layman E., and C. Rudy Engholm. "Normalized legal drafting and the query method." *J. Legal Educ.* 29 (1977): 380.

Some approaches

- ▶ Machine learning
 - ▶ Show the computer examples of people who are and are not qualified
- ▶ Logic based
 - ▶ Our approach

Challenges

- ▶ Text can be ambiguous, imprecise, requires context, spread over different pages/documents
- ▶ Example
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ Option 1: Persons who are lawyers [qualify] and [persons who are] doctors qualify.
 - ▶ Option 2: Persons who are [both doctors and lawyers] qualify

Challenges

- ▶ Text can be ambiguous, imprecise, requires context, spread over different pages/documents
- ▶ Example
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ Option 1: Persons who are lawyers [qualify] and [persons who are] doctors qualify.
 - ▶ Option 2: Persons who are [both doctors and lawyers] qualify

based on Allen, Layman E., and C. Rudy Engholm. "Normalized legal drafting and the query method." J. Legal Educ. 29 (1977): 380.

English as a legal language

- ▶ Is English precise?
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ Persons who are lawyers [qualify] and [persons who are] doctors qualify
 - ▶ Persons who are [both doctors and lawyers] qualify

English as a legal language

- ▶ Is English precise?
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ Persons who are lawyers [qualify] and [persons who are] doctors qualify
 - ▶ Persons who are [both doctors and lawyers] qualify
- ▶ English is too imprecise. How can we provide a precise interpretation to a sentence?

Formal languages

- ▶ Assume having in our language

Formal languages

- ▶ Assume having in our language
 - ▶ Propositional symbols - p_1 p_2 ...
 - ▶ Each can mean anything

Formal languages

- ▶ Assume having in our language
 - ▶ Propositional symbols - p_1 p_2 ...
 - ▶ Each can mean anything
 - ▶ The phrase templates (from now on called connectives)
 - ▶ ... **AND** ...
 - ▶ **IF** ... **THEN** ...

Formal languages

- ▶ Assume having in our language
 - ▶ Propositional symbols - p_1 p_2 ...
 - ▶ Each can mean anything
 - ▶ The phrase templates (from now on called connectives)
 - ▶ ... **AND** ...
 - ▶ **IF** ... **THEN** ...
- ▶ Which of the sentences can be written in this language?
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ Persons who are lawyers [qualify] and [persons who are] doctors qualify
 - ▶ Persons who are [both doctors and lawyers] qualify

Formalization and meanings

- ▶ Since we have propositional symbols, we can write all sentences
- ▶ Persons who are doctors and lawyers qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are doctors and lawyers qualify”

Formalization and meanings

- ▶ Since we have propositional symbols, we can write all sentences
- ▶ Persons who are doctors and lawyers qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are doctors and lawyers qualify”
- ▶ Persons who are lawyers [qualify] and [persons who are] doctors qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are lawyers qualify and the persons who are doctors qualify”

Formalization and meanings

- ▶ Since we have propositional symbols, we can write all sentences
- ▶ Persons who are doctors and lawyers qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are doctors and lawyers qualify”
- ▶ Persons who are lawyers [qualify] and [persons who are] doctors qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are lawyers qualify and the persons who are doctors qualify”

OR

Formalization and meanings

- ▶ Since we have propositional symbols, we can write all sentences
- ▶ Persons who are doctors and lawyers qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are doctors and lawyers qualify”
- ▶ Persons who are lawyers [qualify] and [persons who are] doctors qualify
 - ▶ **p1**
 - ▶ **p1** means “The persons who are lawyers qualify and the persons who are doctors qualify”

OR

- ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1** means “The persons are lawyers”
 - ▶ **p2** means “The persons are doctors”
 - ▶ **p3** means “The persons qualify”

Symbolic reasoning

- ▶ Can we infer if Andrew, who is a doctor, qualify?
 - ▶ **p1**
 - ▶ **p1** means “The persons who are lawyers qualify and the persons who are doctors qualify”

Symbolic reasoning

- ▶ Can we infer if Andrew, who is a doctor, qualify?
 - ▶ **p1**
 - ▶ **p1** means “The persons who are lawyers qualify and the persons who are doctors qualify”
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1** means “The persons are lawyers”
 - ▶ **p2** means “The persons are doctors”
 - ▶ **p3** means “The persons qualify”

Symbolic reasoning

- ▶ Can we infer if Andrew, who is a doctor, qualify?
 - ▶ **p1**
 - ▶ **p1** means “The persons who are lawyers qualify and the persons who are doctors qualify”
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1** means “The persons are lawyers”
 - ▶ **p2** means “The persons are doctors”
 - ▶ **p3** means “The persons qualify”
- ▶ More or less since **p1** does not exactly mean “Andrew, who is a doctor”
 - ▶ We will consider this problem later

Logic

- ▶ We said that the computer can reason over the sentences
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
- ▶ and deduce
 - ▶ **p3**
 - ▶ Andrew is qualified

Logic

- ▶ We said that the computer can reason over the sentences
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
- ▶ and deduce
 - ▶ **p3**
 - ▶ Andrew is qualified
- ▶ The reason it can is that it can understand some of the text
 - ▶ The propositional symbols are just meaningless (for the computer) symbols
 - ▶ But the words **AND**, **IF** and **THEN** have a meaning the computer can understand

Logic

- ▶ We said that the computer can reason over the sentences
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
- ▶ and deduce
 - ▶ **p3**
 - ▶ Andrew is qualified
- ▶ The reason it can is that it can understand some of the text
 - ▶ The propositional symbols are just meaningless (for the computer) symbols
 - ▶ But the words **AND**, **IF** and **THEN** have a meaning the computer can understand
- ▶ Together, syntax (the language) and semantics (meaning) form a **logic**

Logic

- ▶ We said that the computer can reason over the sentences
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
- ▶ and deduce
 - ▶ **p3**
 - ▶ Andrew is qualified
- ▶ The reason it can is that it can understand some of the text
 - ▶ The propositional symbols are just meaningless (for the computer) symbols
 - ▶ But the words **AND**, **IF** and **THEN** have a meaning the computer can understand
- ▶ Together, syntax (the language) and semantics (meaning) form a **logic**
- ▶ More about that in Alex's talk

Formal interpretations

- ▶ We have translated a sentence from English into another language
- ▶ We can express the intended interpretation of a natural language sentence in a non-ambiguous way
 - ▶ We call it **formal interpretation** or **formalization**
- ▶ We can write a computer program to reason about them since some words have a meaning it can understand

Formal interpretations

- ▶ We have translated a sentence from English into another language
- ▶ We can express the intended interpretation of a natural language sentence in a non-ambiguous way
 - ▶ We call it **formal interpretation** or **formalization**
- ▶ We can write a computer program to reason about them since some words have a meaning it can understand
- ▶ How can we create these formalizations?
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**

Formal interpretations

- ▶ We have translated a sentence from English into another language
- ▶ We can express the intended interpretation of a natural language sentence in a non-ambiguous way
 - ▶ We call it **formal interpretation** or **formalization**
- ▶ We can write a computer program to reason about them since some words have a meaning it can understand
- ▶ How can we create these formalizations?
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ NLP
 - ▶ Manually by an expert
 - ▶ Our approach

Formal interpretations

- ▶ We have translated a sentence from English into another language
- ▶ We can express the intended interpretation of a natural language sentence in a non-ambiguous way
 - ▶ We call it **formal interpretation** or **formalization**
- ▶ We can write a computer program to reason about them since some words have a meaning it can understand
- ▶ How can we create these formalizations?
 - ▶ Persons who are doctors and lawyers qualify
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ NLP
 - ▶ Manually by an expert
 - ▶ Our approach
 - ▶ NLP will be integrated later in order to assist

Automation

- ▶ Once we have a formalization, we can use the computer to
 - ▶ Confirm or refute queries
 - ▶ “Is Andrew qualified?”
 - ▶ Check if the formalization makes sense
 - ▶ Consistency
 - ▶ Check if the formalization contains redundancy
 - ▶ Independency
 - ▶ Explain why something is not correct
 - ▶ Model checking, abductive reasoning
 - ▶ Paint graphs and other visualization

Consistency

- ▶ Let's extend our language with a new connective
 - ▶ **NOT** ...

Consistency

- ▶ Let's extend our language with a new connective
 - ▶ **NOT** ...
- ▶ Assume we have the sentences
 - ▶ “Driving under the affect of drugs is a crime”
 - ▶ “Driving during the night is not a crime”
- ▶ One possible formalization is
 - ▶ **IF p1 THEN p2**
 - ▶ p1 means driving under the affect of drugs
 - ▶ p2 means crime
 - ▶ **IF p3 THEN NOT p2**
 - ▶ p3 means driving during the night
- ▶ What is the problem?

Consistency

- ▶ Let's extend our language with a new connective
 - ▶ **NOT** ...
- ▶ Assume we have the sentences
 - ▶ "Driving under the affect of drugs is a crime"
 - ▶ "Driving during the night is not a crime"
- ▶ One possible formalization is
 - ▶ **IF p1 THEN p2**
 - ▶ p1 means driving under the affect of drugs
 - ▶ p2 means crime
 - ▶ **IF p3 THEN NOT p2**
 - ▶ p3 means driving during the night
- ▶ What is the problem?
- ▶ What happens if we drive under the affect of drugs during the night? Are we committing a crime?

Redundancy

- ▶ A set of natural language sentences might contain some redundancy
 - ▶ “Driving under the affect of drugs during the night is a crime”
 - ▶ “One cannot drive during the night”
- ▶ One might be redundant in a certain formalization

Automated reasoning

- ▶ So far, we have said that the computer can answer certain questions
- ▶ In fact, there are specific software which can do that
- ▶ Automated theorem provers
 - ▶ Can answer questions for a specific logic
 - ▶ Our focus

Formalization power

- ▶ We have considered two languages
 - ▶ English
 - ▶ A language containing
 - ▶ **AND**
 - ▶ **NOT**
 - ▶ **IF THEN**
- ▶ What are the limits of each of these languages?

Formalization power

- ▶ We have considered two languages
 - ▶ English
 - ▶ A language containing
 - ▶ **AND**
 - ▶ **NOT**
 - ▶ **IF THEN**
- ▶ What are the limits of each of these languages?
 - ▶ English is too expressive and can denote imprecise/ambiguous sentences
 - ▶ The second is too weak

Weak languages

- ▶ The United Nations Convention on Contracts for the International Sale of Goods - part of Article 31

“If the seller is not bound to deliver the goods at any other particular place, his obligation to deliver consists:

- (a) if the contract of sale involves carriage of the goods - in handing the goods over to the first carrier for transmission to the buyer;
 - (b) in other cases – in placing the goods at the buyer’s disposal at the place where the seller had his place of business at the time of the conclusion of the contract.”
- ▶ How can we formalize it in our weak language?

Possible formalization

- ▶ We need two more connectives
 - ▶ **EITHER ... OR ...**
 - ▶ **IF ... THE OBLIGATION IS**

Possible formalization

- ▶ We need two more connectives
 - ▶ **EITHER ... OR ...**
 - ▶ **IF ... THE OBLIGATION IS**

IF NOT p1 THEN EITHER IF p2 THEN THE OBLIGATION IS p3 OR IF NOT p2 THEN THE OBLIGATION IS p4

- ▶ Where
 - ▶ **p1** is “the seller is bound to deliver the goods at any other particular place”
 - ▶ **p2** is “the contract of sale involves carriage of the goods”
 - ▶ **p3** is “handing the goods over to the first carrier for transmission to the buyer”
 - ▶ **p4** is “placing the goods at the buyer’s disposal at the place where the seller had his place of business at the time of the conclusion of the contract.”

Reasoning example

- ▶ Assuming
 - ▶ **NOT p1** - "the seller is not bound to deliver the goods at any other particular place"
 - ▶ **p2** - " the contract of sale involves carriage of the goods"
- ▶ The theorem prover can conclude
 - ▶ **THE OBLIGATION IS p4** - "There is an obligation for the seller to hand the goods over to the first carrier for transmission to the buyer"

Strengthening the language

- ▶ We can continue to strengthen the language to be able to express all legal nuances
- ▶ Fundamental Requirements
 1. It should be formal (precise and non-ambiguous)
 2. A logic needs to be strong enough to capture interesting legal nuances
 3. It should be weak enough to be implemented in an efficient theorem prover

Formal languages for legal reasoning

- ▶ There are many
 - ▶ Standard deontic logic (SDL)
 - ▶ too weak
 - ▶ Dyadic deontic logics
 - ▶ Input/output logic

Formal languages for legal reasoning

- ▶ There are many
 - ▶ Standard deontic logic (SDL)
 - ▶ too weak
 - ▶ Dyadic deontic logics
 - ▶ Input/output logic
- ▶ Efficient theorem provers exist only for SDL (among those in the list)

Balancing between the requirements

- ▶ Find a logic which is
 - ▶ expressive enough to capture some (not all) legal nuances
 - ▶ has an efficient theorem prover
- ▶ Our choice
 - ▶ DL*
 - ▶ MleanCoP
 - ▶ An efficient normal multi-modal first-order theorem prover (J. Otten)

What can be captured by DL*?

- ▶ Contrary-to-duty scenarios (CTD) and the distinction between ideal and actual obligations
- ▶ Chisholm's paradox
 - (1) it ought to be that Jane helps her neighbors;
 - (2) it ought to be that if Jane helps her neighbors, she tells them that she is coming;
 - (3) if Jane does not help her neighbors, then she ought not to tell them that she is coming;
 - (4) Jane does not help her neighbors.

What can be captured by DL*?

- ▶ Contrary-to-duty scenarios (CTD) and the distinction between ideal and actual obligations
- ▶ Chisholm's paradox
 - (1) it ought to be that Jane helps her neighbors;
 - (2) it ought to be that if Jane helps her neighbors, she tells them that she is coming;
 - (3) if Jane does not help her neighbors, then she ought not to tell them that she is coming;
 - (4) Jane does not help her neighbors.
- ▶ The theorem prover can infer
 - ▶ Ideally Jane ought to help and to tell her neighbors

What can be captured by DL*?

- ▶ Contrary-to-duty scenarios (CTD) and the distinction between ideal and actual obligations
- ▶ Chisholm's paradox
 - (1) it ought to be that Jane helps her neighbors;
 - (2) it ought to be that if Jane helps her neighbors, she tells them that she is coming;
 - (3) if Jane does not help her neighbors, then she ought not to tell them that she is coming;
 - (4) Jane does not help her neighbors.
- ▶ The theorem prover can infer
 - ▶ Ideally Jane ought to help and to tell her neighbors
 - ▶ Currently, she ought not to tell them

What can be captured by DL*?

- ▶ Contrary-to-duty scenarios (CTD) and the distinction between ideal and actual obligations
- ▶ Chisholm's paradox
 - (1) it ought to be that Jane helps her neighbors;
 - (2) it ought to be that if Jane helps her neighbors, she tells them that she is coming;
 - (3) if Jane does not help her neighbors, then she ought not to tell them that she is coming;
 - (4) Jane does not help her neighbors.
- ▶ The theorem prover can infer
 - ▶ Ideally Jane ought to help and to tell her neighbors
 - ▶ Currently, she ought not to tell them
 - ▶ Jane has violated an ideal obligation

DL* language (syntax)

- ▶ Non-normative connectives: **NOT** ..., ... **AND** ... , ...
OR ..., **IF** ... **THEN** ..., **IFF** ... **THEN** ...

DL* language (syntax)

- ▶ Non-normative connectives: **NOT ... , ... AND ... , ... OR ... , IF ... THEN ... , IFF ... THEN ...**
- ▶ Normative unary connectives: **OBLIGED ... , PERMITTED ... , FORBIDDEN ... , IDEALLY ...**

DL* language (syntax)

- ▶ Non-normative connectives: **NOT ... , ... AND ... , ... OR ... , IF ... THEN ... , IFF ... THEN ...**
- ▶ Normative unary connectives: **OBLIGED ... , PERMITTED ... , FORBIDDEN ... , IDEALLY ...**
- ▶ Normative binary operators: **IF ... THEN THE OBLIGATION IS ... , etc.**

Equivalent (more concise) notation

- ▶ $(\sim \dots)$, (\dots , \dots) , $(\dots ; \dots)$
- ▶ $(\dots \Rightarrow \dots)$, $(\dots \Leftrightarrow \dots)$
- ▶ **(Ob ...)**, **(Pm ...)**, **(Fb ...)**, **(Id ...)**
- ▶ $(\dots \mathbf{O} > \dots)$, $(\dots \mathbf{P} > \dots)$, $(\dots \mathbf{F} > \dots)$

NAI

- ▶ Theoretically, we have a relatively expressive language which has automation
- ▶ We provide NAI - Normative AI tool
 - ▶ tools for making formalizations
 - ▶ Focus of Tereza's talk
 - ▶ tools for reasoning over the formalization
 - ▶ Focus of Alex's talk
- ▶ In the rest of my talk
 - ▶ First-order DL*
 - ▶ Note that fully understanding the logic is not necessary for using the tool
 - ▶ But it can help improving and understanding the formalizations

Generalization

- ▶ Before we have considered
 - ▶ “Persons who are doctors and lawyers qualify”
 - ▶ “Is Andrew, who is a doctor, qualified?”
- ▶ We formalized it as
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
- ▶ Where
 - ▶ **p1** means “The persons are lawyers”
 - ▶ **p2** means “The persons are doctors”
 - ▶ **p3** means “The persons qualify”
- ▶ What is the problem?

Need for generalization - problems

- ▶ Andrew is just one of the persons who are doctors
 - ▶ Incorrect interpretation

Need for generalization - problems

- ▶ Andrew is just one of the persons who are doctors
 - ▶ Incorrect interpretation
- ▶ We cannot make a distinction between the people

Need for generalization - problems

- ▶ Andrew is just one of the persons who are doctors
 - ▶ Incorrect interpretation
- ▶ We cannot make a distinction between the people
 - ▶ Assume Jack is an engineer - **p4**

Need for generalization - problems

- ▶ Andrew is just one of the persons who are doctors
 - ▶ Incorrect interpretation
- ▶ We cannot make a distinction between the people
 - ▶ Assume Jack is an engineer - **p4**
 - ▶ If we know that Andrew is a doctor and Jack is an engineer, who is qualified?
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
 - ▶ **p4**

Need for generalization - problems

- ▶ Andrew is just one of the persons who are doctors
 - ▶ Incorrect interpretation
- ▶ We cannot make a distinction between the people
 - ▶ Assume Jack is an engineer - **p4**
 - ▶ If we know that Andrew is a doctor and Jack is an engineer, who is qualified?
 - ▶ **IF p1 THEN p3 AND IF p2 THEN p3**
 - ▶ **p1**
 - ▶ **p4**
- ▶ The prover answers **p3**.

Generalization

- ▶ Solution
 - ▶ **FOR ANY Person IF doctor(Person) THEN qualified(Person)**
- ▶ Where
 - ▶ **doctor** means that Person is a doctor
 - ▶ **qualified** means that Person is qualified

New formalization

1. **FOR ANY Person IF doctor(Person) THEN qualified(Person) AND IF lawyer(Person) THEN qualified(Person)**
2. **doctor(andrew)**
3. **engineer(jack)**
 - ▶ Deduce automatically: **qualified(andrew)**

New formalization

1. **FOR ANY Person IF doctor(Person) THEN qualified(Person) AND IF lawyer(Person) THEN qualified(Person)**
2. **doctor(andrew)**
3. **engineer(jack)**
 - ▶ Deduce automatically: **qualified(andrew)**
 - ▶ concise syntax
1. **((doctor(Person) \Rightarrow qualified(Person)),
(lawyer(Person) \Rightarrow qualified(Person)))**
2. **doctor(andrew)**
3. **engineer(jack)**

Syntactical conventions

1. **((doctor(Person) => qualified(Person)),
 (lawyer(Person) => qualified(Person)))**
 2. **doctor(andrew)**
 3. **engineer(jack)**
- ▶ If a word starts with an Upper case letter, it refers to ANY

Some consequences

- ▶ Problems with propositions only are decidable
- ▶ Problems with variables are only semi-decidable
 - ▶ We are ensured of an answer only if the answer is true
 - ▶ If it is not, the prover may never terminate
- ▶ This has implications on the automated process as we will see in Alex's talk

About us

Team

- ▶ Tereza - Legal expertise
- ▶ Alex - Implementation of the frontend
- ▶ Matteo - Theory and research
- ▶ Tomer - Implementation of the backend, theory and research

About us

Team

- ▶ Tereza - Legal expertise
- ▶ Alex - Implementation of the frontend
- ▶ Matteo - Theory and research
- ▶ Tomer - Implementation of the backend, theory and research

- ▶ NAI is open source and open access
- ▶ We hope to have an interested and involved community

About us

Team

- ▶ Tereza - Legal expertise
- ▶ Alex - Implementation of the frontend
- ▶ Matteo - Theory and research
- ▶ Tomer - Implementation of the backend, theory and research

- ▶ NAI is open source and open access
- ▶ We hope to have an interested and involved community

- ▶ We welcome help!

How can lawyers help

- ▶ Use the tool and send us feedback
 - ▶ Slack
 - ▶ <https://github.com/normativeai/frontend/issues>
- ▶ Help build a benchmark
- ▶ Help define the requirements and future of the tool

How can researchers help

- ▶ Some possible topics
 - ▶ New logical capabilities (abduction, model finding, etc.)
 - ▶ Explainable proofs
 - ▶ Implications of FOL on DL*
 - ▶ Extend the legal language (mainly to include powers)
 - ▶ Integration of defeasibility
- ▶ We will be happy to collaborate on these and other topics

How can software engineers help

- ▶ Help improve the tool
 - ▶ Open source, just fix bugs and implement features and send us a pull request on github
- ▶ Join our team and discussions

Apple T&C

- ▶ Long and intelligible for most people
- ▶ Being signed by millions every day
 - ▶ Including children
- ▶ Can we make the world better?

Apple T&C

- ▶ Long and intelligible for most people
- ▶ Being signed by millions every day
 - ▶ Including children
- ▶ Can we make the world better?
- ▶ Once the document is formalized in NAI
 - ▶ Graphs and visualization
 - ▶ Automatic FAQ
 - ▶ Automatic generation of comics
 - ▶ ...
- ▶ <http://lawforme.in/>

Next part

- ▶ Tereza will show how to use the NAI tool in order to formalize legislation and queries
- ▶ Slack
 - ▶ Will be used in the interactive session
 - ▶ Asking questions, giving feedback, suggesting improvements
 - ▶ <https://tinyurl.com/y2jz1h9r>
